

Diagram illustrating the cross-section of a road with a 50m wide travel lane (jezdnia) and 50m wide shoulders (pobocze). The profile shows a central elevation of ± 0 and side elevations of -5 and -9 . The slopes are indicated as $2,0\%$ and $8,0\%$. The diagram is labeled "A'" and includes a note "dowiązanie do istniejącego terenu" (connection to existing terrain).

Diagram illustrating the cross-section of a road with a drainage ditch. The road width is 500 units, with 75 units on each side (pobocze). The central section is labeled "jezdnia". The road surface has a 2.0% slope towards the center. The side sections have an 8.0% slope towards the ditch. The ditch is located at a depth of -11 units from the centerline. The existing ground level (istn. rów) is shown as a dashed line, and the proposed road level is shown as a solid line. A section line "A-A" is indicated.

Diagram illustrating the cross-section of a road with a central travel lane (jezdnia) and side slopes (pobocze). The central travel lane width is 500, and the side slopes are 75 each. The road surface is shown with a 4.0% downward slope on both sides of the centerline. The existing ground level (istn. rów) is shown as a horizontal line. The proposed road level is shown as a line with a 4.0% slope on the left and a 10.0% slope on the right. Elevation markers are provided at the edges of the side slopes: +13 on the left and -18 on the right. The centerline elevation is marked as 0.0.
